

## RMSOnline Distributor API Link

### RMSOnline Server:

RMS provides a server for you to develop against.  
This will return dummy data from a testing database called Mexican Shores.

<https://www.rms.com.au/RMSO2/API/V2/RMSAPI.aspx>

ALL Distributors are assigned a Caller ID which must be included in the <CallerID> tag of the xml requests that require it. The below sample shows a dummy CallerId that will not work. Please contact RMS for a CallerId for your Company.

You can use our test property, Mexican Shores on to test during your integration.  
The property ID for Mexican Shores is 83 and is to be placed in the <PropertyID> tag of the xml requests that require it.

To give you an idea you would develop your XML code as follows:

Post XML to: <https://www.rms.com.au/RMSO2/API/V2/RMSAPI.aspx>

```
<?xml version="1.0" encoding="UTF-8" ?>
<PMS_PropertyRequest>
  <CallerID>123</CallerID>
  <Properties>
    <PropertyID>83</PropertyID>
  </Properties>
</PMS_PropertyRequest>
```
